Authorization for this examiner's amendment was given in a telephone interviews with Mr. Howard Chin on 28 December 2004 and 7 January 2004. The application has been amended as follows:

As to claim 1, the following paragraph -- wherein the first antenna and second antenna each operating with a radio frequency (RF) filter, the two RF filters having non-overlapping pass bands for improving isolation between the transmitter sub-system and receiver sub-system. -- is inserted at the end of the claim.

Claim 9 is cancelled.

As to claims 31, 32, 33 and 34, -- 30 -- of "The method of claim 30" is deleted, and -- 26 -- is inserted.

Allowable Subject Matter

2. Claims 1-8, 11-29, 31-37 and 39-49 are allowed. The prior art made of record failed to teach:

As to claim 1, a wireless enhancer including the first antenna and second antenna each operating with a radio frequency filter, the two RF filters having non-overlapping pass bands for improving isolation between the transmitter sub-system and receiver sub-system and the switch matrix is a transfer switch with four ports, the first port being connectable to the receiver sub-system, the second being connectable to the transmitter sub-system, the third port being connectable to the first antenna, the fourth port being connectable to the second antenna.

As to claim 26, a method for enhancing a wireless radio signal between a wireless terminal and a base transceiver station comprising scanning a predetermined frequency band of an operating spectrum of the receiver sub-system to determine a carrier frequency band of the incoming signal and adjusting a first carrier frequency for the first antenna based on the determined carrier frequency and at least one additional predetermined criterion.

As to claim 37, a wireless time division duplex (TDD) enhancer including a donor radio frequency band pass filter coupled between the donor antenna and the switch matrix.
